

Technical Data Sheet

ALGENON PLUS

Colourless biocidal solution for the extermination of mould and algae

product description:	Colourless biocidal solution for the extermination of mold and algae on facade and interior wall surfaces made of lime, cement plasters, gypsum boards as well as on concrete and stone surfaces. It serves exclusively as a remedial agent, not as a preventive agent in the form of additives to paints for interior and facade surfaces, decorative pasty plasters, etc. The product does not contain bleaching agents.
area of application:	It is used on various types of interior and facade wall surfaces, in industrial buildings, residential and commercial buildings.
product range:	Colourless solution in a bottle.
dilution:	Do not dilute, ready to use.
consumption:	0.5 l / 2–5 m ² , depending on the absorbency, roughness and degree of infection of the substrate.
density:	1±0.05 kg/l (EN ISO 2811-1)
volatile organic compounds content (VOC):	A(g), 30 g/l; max. 1 g/l (EN ISO 11890-1)
working conditions:	The temperature of the air, material and surface during processing must be higher than +5 °C and lower than +35 °C, and the relative humidity lower than 80 %.
substrate preparation:	Shake the bottle well before use, after which the material is ready for use. Infected areas should be washed with water and, if necessary, mechanically with a cloth or brush. Algenon Plus is applied by spraying, undiluted, on a completely dry surface in one layer. For heavily infected surfaces, a two-layer application of Algenon Plus is recommended, the second layer is applied on a completely dry previous layer. The product should not be applied to damp surfaces. For any additional info, please contact a Chromos-Svjetlost technical advisor.
drying of coatings:	Apply interior walls paint after a minimum of 8 hours (20 °C and relative humidity 65 %). For interior surfaces prone to mold growth, we recommend the use of paints that contain biocidal dry film protection such as <i>Kemopol Protect</i> and <i>Kemopol Premium Protect</i> or the use of naturally alkaline coatings whose pH creates an unfavorable environment for the development of microorganisms such as <i>Kemopol Plus Biosilikat</i> , <i>Kemopol Premium Bio Silikat</i> . The best solution against the formation and development of mold is to remove the causes of their formation (regular ventilation, insulation of cold bridges, removal of sources of moisture, waterproofing...).
safety measures:	It is necessary to follow the general rules for construction works. Keep out of reach of children. Wear protective equipment. Read the product safety data sheet before use.
transport and storage:	Store in a dry and well-ventilated place out of direct sunlight at a temperature of +5 to +30 °C. Protect it from freezing.
shelf life:	In unopened packaging 18 months.
notes:	The product is non-flammable! KEEP FROM FREEZING!
product/packaging disposal:	Empty the packaging completely and hand over to the recycling yard. Dispose of in accordance with valid regulations to an authorized waste collector.
